

WEBROOT® SECURITY AWARENESS TRAINING

Overview

The April 2018 release of Webroot® Security Awareness Training (SAT) incorporates a variety of enhancements that are part of our ongoing development roadmap to make training both highly efficient and effective.

New features in this release

• Reminders for training invites:

A new button is available within active and launched training sessions called "Send Reminder Now". This button sends a 'reminder invitation' to all target employees who have not started, or fully completed, their training.

Global Scope permission for templates:

A new permission has been added to allow a template to be saved as "Site" or "Global". Templates that are saved as "Global" will be viewable across all customer sites to help with global policy management of SAT across all sites.

• New template selector logic module:

A new template selector logic module provides an optional 'enhanced' view of phishing templates.

• Improved site/education page in the Phishing Simulation Wizard:

This refreshed panel of the phishing wizard has been adjusted to improve usability and reduce any confusion.

Schedule campaigns to run on any future date:

Previously phishing and training campaigns could be scheduled up to 72 hours in advance. Now you are able to schedule campaigns to run on any future date you wish using a calendar date picker.

• 100 New Phishing Templates:

We've added 100 new regionalized phishing templates so regardless of Geography you have relevant phishing templates with which to run effective phishing simulations.

Upcoming enhancements: There will be another release towards the end of May 2018 when we plan to introduce the first version of 'Randomization' and LDIF (LDAP) User Management along with a new 'Remote Worker' training course.
